Question:

Display the Employee management system for 3 managers and 12 employees by using advance python features like map(), reduce() and filter()

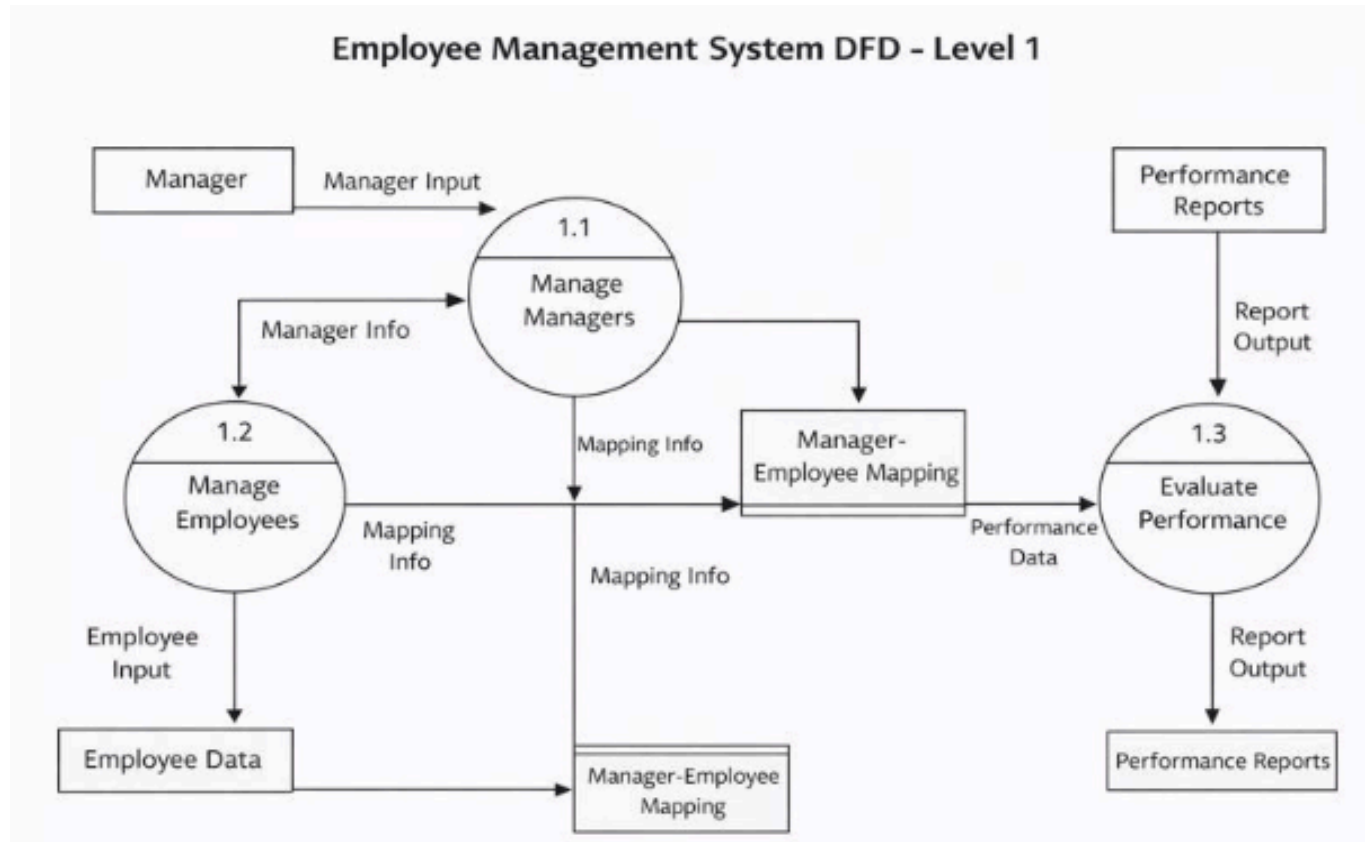

DFDs:

Following are the data flow diagrams for the process:

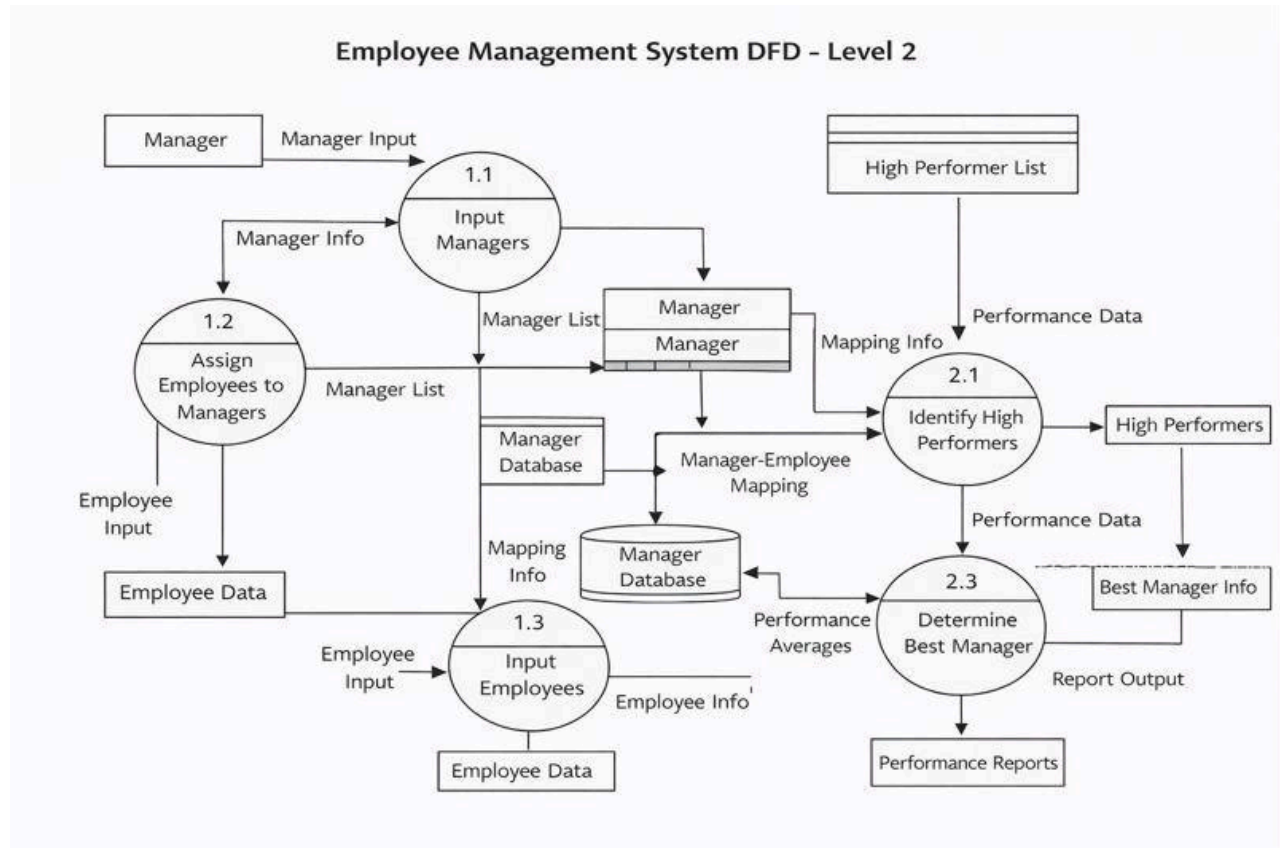

DFD Level 0:

DFD level 1:

DFD level 2:

Algorithm for Manager–Employee Performance Evaluation System

Step 1 → Start

- Begin program execution.

Step 2 → Input Managers

- Create a list of managers and input 3 manager names.

Step 3 → Input Employees

- Create a list `employees` and input 12 employees:
 - Name, manager (validate), performance (0–100).
 - Store as a dictionary for employees.

Step 4 → Manager-Employee Mapping

- Create `manager_employee_map` with each manager mapped to their employees.
- Display it.

Step 5 → High-Performing Employees

- Filter employees with performance ≥ 80 .
- Display names and scores.

Step 6 → Average Performance per Manager

- For each manager:
 - Calculate average of their employees' performance.
 - Store in `manager_avg_performance`.

Step 7 → Best Manager

- Find a manager with the highest average performance.

Step 8 → Display Results

- Show mapping, high performers, averages, and best manager.

Step 9 → End

- Terminate program.
